

ENHERTU PATIENT GUIDE FOR POTENTIAL LUNG PROBLEMS (Interstitial Lung Disease/Pneumonitis)

This Patient Guide has been designed to help you identify any symptoms of lung problems that you may experience while you are on treatment with ENHERTU.

Read this Patient Guide before you start receiving ENHERTU and before each infusion.

This Guide also contains a Patient Wallet Card that you should keep with you and show it to any doctor you consult (for example, if your regular doctor is unavailable or if you are travelling).

This Patient Guide does not include all the information about ENHERTU. Talk to your doctor about your medical condition and treatment and ask if there is any new information about ENHERTU.

This material was developed by AstraZeneca as part of the risk minimization plan for ENHERTU. This material is not intended for promotional use.

Important Potential Lung Problems that May Occur with Your Treatment

Lung problems have been reported with the use of ENHERTU, including lung problems that may be severe, life-threatening, or fatal. These lung problems are often referred to as interstitial lung disease/pneumonitis. Early detection and treatment of lung problems are important to reduce the risk of serious and potentially fatal side effects.

It is important to tell your doctor immediately if you notice any signs or symptoms of lung problems, such as those listed here:

- Cough
- Trouble breathing or shortness of breath
- Fever
- Other new or worsening breathing problems (e.g., chest tightness, wheezing)

Call or see your doctor or nurse right away or go to the nearest Emergency Department if you experience any of these lung-related signs or symptoms. Getting medical treatment right away may keep these problems from becoming more serious.

If you develop lung problems, your healthcare provider may treat you with corticosteroid medicines. Your treatment with ENHERTU may also need to be delayed or completely stopped if you develop lung problems while on therapy.

Before Starting Treatment with ENHERTU

Tell your doctor about:

- Any lung, kidney, or heart problems, or any blood problems (low blood count) you have or have had in the past, in particular if you have a history of lung problems, including inflammation of the lung known as interstitial lung disease (ILD).
- Any other medical problems you have or have had in the past.
- All the medicines you take, including prescription and over-the-counter medicines, vitamins, minerals, natural supplements, or alternative medicines. Know the medicines you take. Keep a list of them to show your doctor and pharmacist when you get a new medicine.

This Patient Guide should not replace your doctor's advice about your medical condition or your treatment.

Where to Find Further Information

Find the full Product Monograph that is prepared for healthcare professionals and includes Patient Medication Information by visiting the Health Canada website (<https://www.canada.ca/en/health-canada/services/drugs-health-products/drug-products/drug-product-database.html>), the manufacturer's website (www.astrazeneca.ca), or by calling 1-800-668-6000.

Patient Wallet Card

- Reminds you about key symptoms of lung problems that need to be reported immediately to the doctor/nurse
- Contains the contact details of your treating doctor
- Will make other doctors aware that you are being treated with ENHERTU

Always carry your Patient Wallet Card with you and show it to any doctor you speak with (for example, if your regular doctor is unavailable or if you are travelling).
